SUMMARY

AI & Automation Developer at IDEaS (a SAS company) who turns enterprise workflows into deployed automation: LLM-assisted report pipelines, Playwright checks across Salesforce and product systems; shipped a production SaaS solo.

EXPERIENCE

IDEaS Revenue Solutions (a SAS company)

Pune, India

AI & Automation Developer

Nov 2025 – Present

- Built a Python pipeline that generates client forecast-review reports (forecast vs. projections) as PDF, Word and Excel with LLM-written commentary (Microsoft AI Builder); modular services, Dockerised, through SIT, UAT and hypercare.
- Automated end-to-end checks of client setup on the G3 revenue-management platform with Playwright, validating account numbers and integration types across Salesforce, the product UI and database, in Docker.
- Built a Streamlit tool (pandas, Altair) that automates best-available-rate trends, property/chain extraction and pricing-decision validation over Excel exports, split into config, validation, calculation and chart services.

Business Intelligence & Automation Intern

Jul 2025 – Oct 2025

- Automated a shared customer-care mailbox with scheduled Power Automate flows: client and system emails (chain codes, timestamps) logged to Excel, replies reconciled from Sent Items, saving the team ~3 hours of manual tracking.

Software Developer Intern

Jan 2025 – Jun 2025

- Migrated the legacy JSP/Struts "At-a-Glance" dashboard of an enterprise revenue-management product to Angular and Spring Boot, building Angular components and REST APIs over optimized SQL and Java Streams.
- Extended APIs from single-day to custom date ranges and shipped the new UI behind a database-driven feature toggle (SQL migration) for a controlled, per-client rollout from the legacy JSP views.

IFM Engineering Pvt. Ltd.

Pune, India

Security Software Intern

Jul 2024 – Dec 2024

- Detected and mitigated XSS, SQL-injection and misconfiguration risks in internal audits; automated scanning.

PROJECTS

Proofline | Python, MCP, pytest, Hypothesis

github.com/NamanChordia07/proofline | Sep 2026

- Built a verifier that checks every number in LLM-written reports against source data, diagnoses the error (wrong basis, entity, direction, points vs. percent) and repairs it; CI-gating CLI, Python library and MCP server.
- Built the benchmark with independent ground truth (3 domains, 9 injected error types, held-out phrasing): 98.9–100% recall at 1.1–4.5% false alarms on unseen phrasing, vs. 16–20% recall for a naive value lookup.

ClueCode | Electron, TypeScript, Next.js, PostgreSQL, Razorpay

cluecode.in | Sep 2026

- Designed, built and deployed a full-stack desktop AI assistant end to end (cluecode.in): Electron client streaming multimodal Gemini answers, Next.js/Postgres backend on Vercel and Neon, auth and Razorpay subscriptions.
- Enforced one active device per account with server-clock session leases and heartbeats backed by a partial unique index; made payment webhooks signature-verified and idempotent; 270+ automated tests.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL

Integration & automation: Playwright, Power Automate, REST APIs, webhooks, Salesforce, PDF/Word/Excel generation

Applied AI: LLM integration (Gemini, Claude, Microsoft AI Builder), MCP servers, evaluation and guardrails

Frameworks & data: Spring Boot, Angular, Next.js, React, Electron, pandas, Streamlit, Power BI

Infrastructure: Docker, PostgreSQL, MySQL, Git, GitHub Actions, Vercel, Linux

EDUCATION

Vishwakarma Institute of Information Technology, Pune | B.Tech, Computer Engineering · CGPA 8.9/10

May 2025

LEADERSHIP & AWARDS

- Technical Head, Cyber Cell, VIIT (5+ security workshops and CTFs, 150+ students) · Joint runner-up, Data Viz-a-thon.
