SUMMARY

Software engineer across Java/Spring Boot and Angular (modernization at IDEaS, a SAS company), Python automation and TypeScript full-stack; designed and shipped ClueCode, a subscription app with a Next.js/Postgres backend and 270+ tests.

EXPERIENCE

IDEaS Revenue Solutions (a SAS company)

Pune, India

AI & Automation Developer

Nov 2025 – Present

- Engineered a modular Python report service (data, calculation, chart and merge modules) that generates forecast-review reports as PDF, Word and Excel with LLM commentary; Dockerised through SIT, UAT and hypercare.
- Wrote Playwright end-to-end automation that checks client configuration (account numbers, integration types) across Salesforce, the G3 revenue-management UI and its database, in Docker.
- Built a Streamlit analytics app (pandas, Altair) for best-available-rate trends and pricing-decision validation, split into config, validation, calculation and chart services so new analyses plug in cleanly.

Business Intelligence & Automation Intern

Jul 2025 – Oct 2025

- Automated a shared customer-care mailbox with scheduled Power Automate flows: client and system emails (chain codes, timestamps) logged to Excel, replies reconciled from Sent Items, saving the team ~3 hours of manual tracking.

Software Developer Intern

Jan 2025 – Jun 2025

- Migrated the legacy JSP/Struts "At-a-Glance" dashboard of an enterprise revenue-management product to Angular and Spring Boot, building Angular components and REST APIs over optimized SQL and Java Streams.
- Extended the dashboard APIs from single-day to custom date-range queries, refactoring and tuning the underlying SQL.
- Shipped the new UI behind a database-driven feature toggle (SQL migration) so clients could be switched between legacy JSP and Angular views for a controlled rollout.

IFM Engineering Pvt. Ltd.

Pune, India

Security Software Intern

Jul 2024 – Dec 2024

- Detected and mitigated XSS, SQL-injection and misconfiguration risks in internal audits; automated scanning.

PROJECTS

ClueCode | Electron, TypeScript, Next.js, PostgreSQL, Razorpay

cluecode.in | Sep 2026

- Designed and shipped a subscription desktop app (cluecode.in): Electron + TypeScript client, Next.js API on Vercel, PostgreSQL (Neon, Drizzle), Better Auth, Razorpay; npm-workspaces monorepo with shared zod contracts.
- Enforced one active device per account with server-clock session leases, heartbeats and a partial unique index; made Razorpay webhooks signature-verified and idempotent; built an audited, role-based admin console.
- Hardened Electron (sandboxed renderers, CSP, narrow IPC, DPAPI-encrypted user keys) and covered the system with 270+ automated tests: unit, Postgres integration, Electron security and WCAG 2.1 AA end-to-end suites.

Proofline | Python, MCP, pytest, Hypothesis

github.com/NamanChordia07/proofline | Sep 2026

- Built a zero-dependency Python library and CLI that parses numbers with display-precision semantics, attributes each claim to a metric, entity and comparison basis, and verifies it against computed facts.
- Built the benchmark with independent ground truth (3 domains, 9 injected error types, held-out phrasing): 98.9–100% recall at 1.1–4.5% false alarms on unseen phrasing, vs. 16–20% recall for a naive value lookup.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL

Backend: Spring Boot, REST APIs, Node.js (Next.js API routes), PostgreSQL, MySQL, Drizzle ORM

Frontend & desktop: Angular, React, Next.js, Electron

Testing & tooling: Playwright, Vitest, pytest, Hypothesis, Docker, Git, GitHub Actions CI, Vercel, Linux/Shell

AI & automation: Gemini and Claude APIs, MCP, Power Automate, Streamlit

EDUCATION

Vishwakarma Institute of Information Technology, Pune | B.Tech, Computer Engineering · CGPA 8.9/10

May 2025

LEADERSHIP & AWARDS

- Technical Head, Cyber Cell, VIIT (5+ security workshops and CTFs, 150+ students) · Joint runner-up, Data Viz-a-thon.
